SUMMARY

Software Engineer with proven ability in full-stack development and backend APIs. Delivered significant automation-driven time savings and built user-centric desktop applications. Passionate about building impactful software and growing as a developer.

EDUCATION

University of Texas Rio Grande Valley

| Bachelor of Science in Computer Science

Coursework: Algorithms and Data Structures, Software Engineering, Computer Networks, Computer Architecture, Robotics Programming, UX/UI, Deep Learning

SKILLS

Languages: Python, Java, JavaScript, C++, SQL, TypeScript, Node.js

Frameworks & Libraries: Django, Spring Boot, React, HTML/CSS, Tailwind CSS, CTkinter

Databases: MySQL, Oracle

Tools & Platforms: Git, Smartsheet API, eBay API, Google API, Stripe API, Heroku, Vercel, Google Gemini AI

Concepts: Full-Stack Development, Desktop Application Development Backend API Development, Responsive UI Design

EXPERIENCE

General Electric Aerospace | August 2024-Present

Software Engineer

Python, Oracle, SQL, Data Analysis, AI, Smartsheet, GUI

- Developed fullstack desktop applications written in Python with Tkinter, Smartsheet API, Oracle Databases, SQL, and AI including OCR to execute on Kaizen initiatives and lean business practices.
- Achieved over **700%** time savings and significantly accelerated departmental processes by replacing repetitive manual tasks with fast, AI-powered automation.
- Implemented keyboard and mouse input functionality to execute processes faster than human employees, saving hours weekly and reducing typos.
- Vastly improved legacy shop order tagging system with user centric desktop app with improved SQL query reducing wait time by over **950%**. Automatically sends print task to one of seven printers depending on team designation.
- Built with quality object-oriented software development practices, ensuring easy updates and maintenance as department processes evolve.
- Create and maintain business reports to provide future production forecasts and machine capacity that allows leadership to plan man hours and scheduling.
- Provide shop order tracking dashboards allowing managers to identify production and communication gaps.

Personal projects

- **Fullstack Ecommerce Website:** Deployed frontend on Vercel and backend on Heroku with Kitefin add-on for MySQL database management.
Stack: React, JavaScript, Spring Boot, Java, CSS, MySQL, Heroku, Vercel
- **AI Powered Ordering System:** Developed a Spring Boot backend for an AI-driven drone parts ordering app, integrating Google Gemini AI to parse emails and automate approvals; designed REST APIs for order and approval workflows, and collaborated on a responsive React frontend integrated with the AI-powered backend.
Stack: Java, Spring Boot, Gemini AI, JavaScript, React
